POWERFLEX DELUXE WALKING STICKS

ABSTRACT

A walking stick is generally known as a lightweight, straight, rigid wooden stick, held in one hand as an aid in walking. POWERFLEX DELUXE WALKING STICKS are a better concept of walking stick. They are designed to be used in pairs, (imagine a cross country skier without skis or snow), as an aid in walking, to relieve strain on lower body joints, (ankles knees, hips), and to exercise and tone the upper body muscles at the same time. The essential feature is the curved and slightly flexible shaft of the stick, which has a shock absorbing and power releasing effect. What this means in real life terms is that you can walk farther more easily in more comfort and exercise your upper body at the same time while using POWERFLEX DELUXE WALKING STICKS!
